using the Internet connection lost document
and then pointing this unkey event to play the
lost annoucement if it exits, change the play file to
something simple. etc/asterisk/local/announcements/offline.ul

rpt.conf just before the ;Misc. settings

events=events40039   ;change to your node

then down just after [wait-times40039]

[events40039] ;replace 40039 with your node
COS = v|e|${RPT_RXKEYED}
*BAD = f|t|COS ;replace *BAD with your dtmf command you want to play

the *BAD is from the Internet connection lost setup document.
here are somemore examples for more nodes on the same raspberry

[events5110] ;replace 5086 with your node
COS = v|e|${RPT_RXKEYED}
*974 = f|t|COS ;replace *974 with your dtmf command you want to play

[events5118] ;replace 5086 with your node
COS = v|e|${RPT_RXKEYED}
*975 = f|t|COS ;replace *975 with your dtmf command you want to play

now everytime you unkey your node from using RF access to your
repeater
you will hear what ever is in offline.ul
